USEFUL TIPS

- Start the process as early as possible. Delays with lab results or vet appointments can push back your timeline significantly.
- Research airline pet policies early. Some airlines have limited cargo spots, especially in summer. Temperature embargoes apply above 30C / below -5C at any transit airport.
- Start crate training weeks before travel. A calm, crate-confident dog will have a much less stressful journey.
- The tapeworm treatment for Lithuania must be given by a vet 1-5 days (24-120 hours) before arrival. Schedule this appointment well in advance -- too early or too late means refusal.
- If your dog is a restricted or mixed breed, get a breed DNA test and official documentation before traveling. Border officials in Lithuania can refuse entry for banned breeds.
